## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a Center Server, classified in class 35, subclass 1.16.
- II. Claims 19-32, 51-64 and 66, drawn to a printer controller, classified in class 358, subclass 1.6.
- III. Claim 33-50 and 65, drawn to collecting image data from a print order, classified in class 358, subclass 1.15.
- IV. Claims 67-79, 80-92, 93 and 94-104, drawn to a processing application over a network, classified in class 358, sub-class 1.18.
- V. Claims 105-116, drawn to a method of managing a position of an image, classified in class 358, subclass 1.12.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombinations II-V\*\*\* has separate utility such as II (printing a control operation whether a server is used or not) III (collecting image from a print order whether a server is used or not or whether the image is displayed over a network) IV (processing applications over a network, whereby I-III and V may be performed without connection to a network V (method of managing a position of an image (which does not require a server, nor a print controller nor establishing a print order nor processing over a network). See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
